PROMATIS

PROMATIS EXTRACTOR / DATASMART.
PLUG-IN MDM.

Master Data Management

In times of globalization, quickly available and trustworthy information is the most important requirement for transparent and agile business processes and entrepreneurial decisions.

Consistent master data whose quality management plays a central role in this context, form the basis for that. The basic operational information stored in the master data can be used for various questions.

In this context, especially large corporations with distributed locations and parallel IT systems face a challenge. In order to ensure the quality of data and to create a central operational reference database, a company-wide harmonization and consolidation is necessary. This can be ensured by master data management (MDM).
In order to achieve a constantly high master data quality, processes with strategic, organizational and methodical activities must be defined and a suitable IT infrastructure with necessary interfaces needs to be implemented.

Our Solution

The Plug-in MDM is an application-related extension to the products PROMATIS Extractor and PROMATIS DataSmart. The tool enables the extraction of complete master data records from Oracle E-Business Suite and Oracle Cloud Applications.

Available master data objects are for example customers, suppliers and articles. The extracted data is imported into analysis tools or Microsoft Excel for further use. In addition, the Plug-in can be used to provide data necessary to answer customer queries about personal data in accordance with Article 15, Paragraph 3 of the General Data Protection Regulation (GDPR).

The seamless integration into the solutions Oracle E-Business Suite and Oracle Cloud Applications based on standardized extraction routines enables the use of master data in different application scenarios. The extraction products PROMATIS Extractor and/ or PROMATIS DataSmart are required for this application-oriented tool.

Your Benefit

With the Plug-in MDM, you receive a universally applicable software tool for the extraction of master data in a diverse range of application scenarios, e.g. for new implementations, system tests, master data management or data quality management.
Preconfigured extraction routines for the Financials and Supply Chain Management areas of Oracle E-Business Suite and Oracle Cloud Applications are included in the package. In addition, the special requirements coming with these application areas are integrated in the standard version. The tool can be extended flexibly: supplied extraction routines can be supplemented and new ones can be added.
In addition to these functional advantages, PROMATIS contributes its expert knowledge – both in routine processes and for specific requirements, specialists with profound know-how and many years of experience are ready to offer their assistance. The perfect combination of state-of-the-art technologies and complementary services enables you to master your challenges and achieve high productivity gains.
