

OAM – USE CASE

SOFTWARE COMPANY

Products in Use

- Oracle Access Manager, APEX, Custom Application
- OAM 12c Upgrade

The Customer

With 400 employees and a new business volume of 1.5 billion EUR in 2019, the company is the second largest manufacturer-independent leasing company in Germany. The specialist for equipment leasing uses a profound industry, product and property expertise to offer its customers significant added value and consulting at eye level. As a result, the customer can rely on many years of experience in equipment leasing, lease purchase and sales financing with a particular focus on industries such as construction, logistics and printing as well as IT and communication.

The Challenge

The customer uses a lot of applications in combination with SSO. The customer was looking to replace the existing Oracle Access Manager (OAM) with a new version. SSO is used for the most of the internal applications based on the windows logon.

The Solution

To reduce the Upgrade the new OAM is configured parallel to the existing one. This new setup includes a new virtual machine and allows an rolling switch to the new OAM instance. Further more the authentication method within APEX has been changed to header variable to simplify the setup.
